Excerpt: . . . layer has the best conversion efficiency. On the contrary the performance of the other cells deposited with the (Cd, Zn) S, ZnS, or In (OH) S buffer layers yields a lower conversion x y efficiency than that of the CIGSS CdS cell. From the results of this study further optimization of the alternative buffer layers is needed, which includes the optimization of the deposition conditions to improve the film quality and the investigation of the effects of post-deposition annealing and light soaking on the devices. 35 (b) (c) (a) 30) 2 cm 25 (mA (d) 20 ensity 2) F.
