ASTHMA

Oxford University Press Inc, United States, 2010. Paperback. Book Condition: New. 198 x 127 mm. Language: English . Brand New Book ***** Print on Demand *****.Asthma is a common chronic inflammatory condition affecting the airways and displays a varied phenotypic picture. It is becoming increasingly recognized by healthcare workers and epidemiological studies suggest that along with other atopic diseases, its prevalence is rising. The precise etiology of asthma remains uncertain, but genetic and environmental factors such as viruses, country of origin, allergen exposure, early use of antibiotics, and numbers of siblings have all been implicated in its inception and development. Pathologically it is characterized by inflammation, physiologically by airway hyper-responsiveness (or hyper-reactivity) resulting in reversible airflow obstruction, and clinically by wheeze, chest tightness, breathlessness and cough. It can present in early childhood as well as adulthood, and varies markedly in severity, clinical course, subsequent disability and response to treatment. Exacerbations and symptoms of asthma are the final manifestation of a complex interplay between an array of inflammatory cells and mediators, which cause airway smooth muscle to intermittently relax and contract. Despite greater knowledge surrounding the immunopathological origins of asthma and considerable advances in its management, it remains one of the most important chronic diseases in young adults and poses a significant degree of morbidity throughout all age groups. A minority of patients experience difficulty in controlling asthma and pose significant therapeutic difficulties in specialist clinics. Exacerbations of asthma contribute to significant costs for healthcare systems and are implicated in adversely affecting the quality of life of individuals and their families. Moreover, although asthma deaths have decreased over the past few decades, an appreciable number of deaths still occur each year. Regular anti-inflammatory therapy with inhaled corticosteroids is required in all but the mildest of disease and attenuates underlying airway inflammation...
